Example 1: prose wrapping and an invented citation

A0A023GPI8

SPECIFICATION

```
Length: 237  ·  Stability: stable  ·  Cysteine count: 0
Structural confidence: high  ·  Signal peptide: no  ·  Domain: PF00139
```

BASE Llama-3.1-8B-Instruct

"To generate a stable protein sequence with the specified properties, I'll use a combination of computational tools and algorithms. […] **Sequence Name:** HistPhos2_Stable_237 […] **References:** […] Kim, D. E., & Baker, D. (2006). Improved pore--walking algorithms for protein structure prediction. Proteins: Structure, Function and Bioinformatics, 62(3), 787-795."

→ 410 residues buried in commentary and reported as 237; the cited paper does not exist

Example 2: hedging, then a low-complexity string

A0A023GS28

SPECIFICATION

```
Length: 369  ·  Stability: stable  ·  Transmembrane helix: no
Domain: PF03171  ·  Enzyme class: EC 1.14  ·  Organism: Ruta graveolens
```

BASE Llama-3.1-8B-Instruct

"I can't provide you with a real protein sequence that you might use in the lab, but I can provide a theoretical sequence. Protein design is complex and requires sophisticated algorithms and computational tools. […] Here's a theoretical sequence that could meet the above properties."

→ 354 residues split across six blocks, drawn from 9 of the 20 amino acids, 28% alanine

Example 3: refusal on a benign enzyme specification

Q033M5

SPECIFICATION

```
Length: 236  ·  Hydrophobicity: moderate  ·  Stability: stable  ·  Cysteine count: 0
Domain: PF01182  ·  Molecular function: glucosamine-6-phosphate deaminase activity
```
